GCSE Science Unit 2 Foundation Tier 4782-01

All Candidates' performance across questions

5. Neutralisation reactions occur when acids and alkali react together. Metals can also neutralise acids. The general equation for the reaction between a metal and acid is given by:
metal + acid $\longrightarrow$ salt + hydrogen
(a) Complete the word equation for the reaction below.
magnesium + hydrochloric acid $\longrightarrow$........................................ $+$
(b) Kate is studying the reaction between hydrochloric acid and the metal magnesium.

In her experiment she:

1. measured $25 \mathrm{~cm}^{3}$ dilute hydrochloric acid at $20^{\circ} \mathrm{C}$ with a measuring cylinder;
2. added the acid to a conical flask;
3. added 1 g of magnesium to the acid and started a stop watch;
4. measured the total volume of gas every 20 seconds.

The results of her experiment are shown below.

## Kate's Results

| Time (s) | 0 | 20 | 40 | 60 | 80 | 100 | 120 | 140 | 160 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Volume <br> of <br> hydrogen <br> $\left(\mathrm{cm}^{3}\right)$ | 0 | 22 | 40 |  | 63 | 68 | 71 | 72 | 72 |

(i) Complete the graph of her results.

```
volume of
hydrogen ( \(\mathrm{cm}^{3}\) )
```

(ii) Kate has lost her result for 60 s . Use your graph to estimate the volume of gas at 60 s .
$\ldots . . . . . . . . . . . . . . . \mathrm{cm}^{3}$
(iii) State one way in which Kate can improve the validity of her experiment.

(iv) Explain what happens to the pH during this reaction.
$\qquad$
$\qquad$
$\qquad$
(v) Predict the volume of hydrogen you would expect to be collected after 200 s. Give one reason for your answer.
$\qquad$
$\qquad$
$\qquad$
(c) Kate wants to compare the volume of hydrogen given off every 20 seconds if she repeated the experiment with iron instead of magnesium. State two variables that need to be controlled to ensure a fair test.
1.
2.
5. Neutralisation reactions occur when acids and alkali react together. Metals can also neutralise acids. The general equation for the reaction between a metal and acid is given by:

$$
\text { metal }+ \text { acid } \longrightarrow \text { salt }+ \text { hydrogen }
$$

(a) Complete the word equation for the reaction below.

$$
\text { magnesium }+ \text { hydrochloric acid } \longrightarrow \text { maginesium } \quad \text { Chloride. }+\ldots \text { water }
$$

(b) Kate is studying the reaction between hydrochloric acid and the metal magnesium.

In her experiment she:

1. measured $25 \mathrm{~cm}^{3}$ dilute hydrochloric acid at $20^{\circ} \mathrm{C}$ with a measuring cylinder;
2. added the acid to a conical flask;
3. added 1 g of magnesium to the acid and started a stop watch;
4. measured the total volume of gas every 20 seconds.

The results of her experiment are shown below.

## Kate's Results

| Time (s) | 0 | 20 | 40 | 60 | 80 | 100 | 120 | 140 | 160 |
| :---: | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Volume <br> of <br> hydrogen <br> $\left(\mathrm{cm}^{3}\right)$ | 0 | 22 | 40 |  | 63 | 68 | 71 | 72 | 72 |

(i) Complete the graph of her results.

## volume of hydrogen ( $\mathrm{cm}^{3}$ )

(ii) Kate has lost her result for 60 s . Use your graph to estimate the volume of gas at 60 s.

$$
50
$$ $\mathrm{cm}^{3}$

(iii) State one way in which Kate can improve the validity of her experiment.
make her results more reliable.
(iv) Explain what happens to the pH during this reaction.

The pH during the reaction would go down, because the acid is getting stronger.
$\qquad$
(v) Predict the volume of hydrogen you would expect to be collected after 200 s. Give one reason for your answer.
1 think that the results would stay at 72 because after 140 the results seem to be the same.
(c) Kate wants to compare the volume of hydrogen given off every 20 seconds if she repeated the experiment with iron instead of magnesium. State two variables that need to be controlled to ensure a fair test.

1. do the experiment more than once.
2. have move than one person timing it
3. Neutralisation reactions occur when acids and alkali react together. Metals can also neutralise acids. The general equation for the reaction between a metal and acid is given by:

$$
\text { metal }+ \text { acid } \longrightarrow \text { salt }+ \text { hydrogen }
$$

(a) Complete the word equation for the reaction below.
magnesium + hydrochloric acid $\longrightarrow$ magnesium + aranater 0 ande.
(b) Kate is studying the reaction between hydrochloric acid and the metal magnesium.

In her experiment she:

1. measured $25 \mathrm{~cm}^{3}$ dilute hydrochloric acid at $20^{\circ} \mathrm{C}$ with a measuring cylinder;
2. added the acid to a conical flask;
3. added 1 g of magnesium to the acid and started a stop watch;
4. measured the total volume of gas every 20 seconds.

The results of her experiment are shown below.

## Kate's Results

| Time (s) | 0 | 20 | 40 | 60 | 80 | 100 | 120 | 140 |
| :---: | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Volume <br> of <br> hydrogen <br> $\left(\mathrm{cm}^{3}\right)$ | 0 | 22 | 40 |  | 160 |  |  |  |

(i) Complete the graph of her results.

## volume of

hydrogen ( $\mathrm{cm}^{3}$ )

(ii) Kate has lost her result for 60 s . Use your graph to estimate the volume of gas at 60 s .

$$
50) \mathrm{km}^{3} \square
$$

(iii) State one way in which Kate can improve the validity of her experiment.
$\qquad$
make her results more reliable $\lambda$
(iv) Explain what happens to the pH during this reaction.

The pH during the reaction would go down, $X$ because the acid is getting stronger.
$\qquad$
(v) Predict the volume of hydrogen you would expect to be collected after 200 s. Give one reason for your answer.
1 think that the results would stay at 77 because after 140 the results seem to be the same. $\square$
$\square$
(c) Kate wants to compare the volume of hydrogen given off every 20 seconds if she repeated the experiment with iron instead of magnesium. State two variables that need to be controlled to ensure a fair test.

1. do the experiment more than once
2. have more than one person timing it
3. Neutralisation reactions occur when acids and alkali react together. Metals can also neutralise acids. The general equation for the reaction between a metal and acid is given by:
```
metal + acid \longrightarrow}\longrightarrow\mathrm{ salt + hydrogen
```

(a) Complete the word equation for the reaction below.

(b) Kate is studying the reaction between hydrochloric acid and the metal magnesium. In her experiment she:

1. measured $25 \mathrm{~cm}^{3}$ dilute hydrochloric acid at $20^{\circ} \mathrm{C}$ with a measuring cylinder;
2. added the acid to a conical flask;
3. added 1 g of magnesium to the acid and started a stop watch;
4. measured the total volume of gas every 20 seconds.

The results of her experiment are shown below.
Kate's Results

| Time (s) | 0 | 20 | 40 | 60 | 80 | 100 | 120 | 140 | 160 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Volume <br> of <br> hydrogen <br> $\left(\mathrm{cm}^{3}\right)$ | 0 | 22 | 40 |  | 68 | 68 | 71 | 72 | 72 |

> (i) Complete the graph of her results.
volume of
hydrogen $\left(\mathrm{cm}^{3}\right)$

(ii) Kate has lost her result for 60 s . Use your graph to estimate the volume of gas at
60 s . $54 \mathrm{~cm}^{3}$
(iii) State one way in which Kate can improve the validity of her experiment. Repeating experiment watatas

Ser the pH increases ne know this because of the aspers from the gray
(v) Predict the volume of hydrogen you would expect to be collected after 200 s. Give 6 lam because the hydrogen will soon ${ }^{2}$ the decrease in time.
(c) Kate wants to compare the volume of hydrogen given off every 20 seconds if she repeated controlled to ensure a fair test.
controlled to ensure a fair test. 1.10 d dan
2 Put in the some volume.
5. Neutralisation reactions occur when acids and alkali react together. Metals can also neutralise acids. The general equation for the reaction between a metal and acid is given by:

```
metal + acid }\longrightarrow\mathrm{ salt + hydrogen
```

(a) Complete the word equation for the reaction below.

(b) Kate is studying the reaction between hydrochloric acid and the metal magnesium. In her experiment she:

1. measured $25 \mathrm{~cm}^{3}$ dilute hydrochloric acid at $20^{\circ} \mathrm{C}$ with a measuring cylinder;
2. added the acid to a conical flask;
3. added 1 g of magnesium to the acid and started a stop watch;
4. measured the total volume of gas every 20 seconds.

The results of her experiment are shown below.
Kate's Results

| Time (s) | 0 | 20 | 40 | 60 | 80 | 100 | 120 | 140 | 160 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Volume <br> of <br> hydrogen <br> $\left(\mathrm{cm}^{3}\right)$ | 0 | 22 | 40 | 63 | 68 | 71 | 72 | 72 |  |

(i) Complete the graph of her results.

## volume of hydrogen ( $\mathrm{cm}^{3}$ )

(ii) Kate has lost her Result for 60 s . Use your graph to estimate the volume of gas at
60 s . 54 cm 回
(ii) Stale one way in which kate an improve the eviditive the ferexperinent: Repeating experiment wat ar times a
 She The pitt increases /we know this because of the alsiners from the gray

 then decrease in time.
(c) Kate wants to compare the volume of hydrogen given off every 20 seconds if she repeated the experiment with iron instead of magnesium. State two variables that need to be
controlled to ensure a fair test. 1. DId in 1 of iron
2. Put in the scheme volume $x$
5. Neutralisation reactions occur when acids and alkali react together. Metals can also neutralise acids. The general equation for the reaction between a metal and acid is given by:

$$
\text { metal }+ \text { acid } \longrightarrow \text { salt }+ \text { hydrogen }
$$

(a) Complete the word equation for the reaction below.

(b) Kate is studying the reaction between hydrochloric acid and the metal magnesium. In her experiment she:

1. measured $25 \mathrm{~cm}^{3}$ dilute hydrochloric acid at $20^{\circ} \mathrm{C}$ with a measuring cylinder;
2. added the acid to a conical flask;
3. added 1 g of magnesium to the acid and started a stop watch;
4. measured the total volume of gas every 20 seconds.

The results of her experiment are shown below.

## Kate's Results

| Time (s) | 0 | 20 | 40 | 60 | 80 | 100 | 120 | 140 | 160 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Volume <br> of <br> hydrogen <br> $\left(\mathrm{cm}^{3}\right)$ | 0 | 22 | 40 | 68 | 71 | 72 | 72 |  |  |

(ii) Kate has lost her result for 60 s . Use your graph to estimate the volume of gas at 60 s .
$54 . \mathrm{cm}^{3}$
(iii) State one way in which Kate can improve the validity of her experiment.
$\qquad$
(iv) Explain what happens to the pH during this reaction.
$\qquad$ The $\qquad$ pH would increase $\qquad$
$\qquad$
$\qquad$
(v) Predict the volume of hydrogen you would expect to be collected after 200 s. Give one reason for your answer.
I predict the volume to be $72 \mathrm{~cm}^{3}$, I think this because 140 s and 160 s are . the same, it dian' in crease.
(c) Kate wants to compare the volume of hydrogen given off every 20 seconds if she repeated the experiment with iron instead of magnesium. State two variables that need to be controlled to ensure a fair test.

1. $\qquad$ need to $\qquad$ add lg of iron just like magnesium.
2. $\qquad$ Need the some amount of Hydrochoric acids.
3. Neutralisation reactions occur when acids and alkali react together. Metals can also neutralise acids. The general equation for the reaction between a metal and acid is given by:

$$
\text { metal }+ \text { acid } \longrightarrow \text { salt }+ \text { hydrogen }
$$

(a) Complete the word equation for the reaction below.

Magnesium choriele
magnesium + hydrochloric acid $\longrightarrow$
-Gyesindul+
(b) Kate is studying the reaction between hydrochloric acid and the metal magnesium. In her experiment she:

1. measured $25 \mathrm{~cm}^{3}$ dilute hydrochloric acid at $20^{\circ} \mathrm{C}$ with a measuring cylinder;
2. added the acid to a conical flask;
3. added 1 g of magnesium to the acid and started a stop watch;
4. measured the total volume of gas every 20 seconds.

The results of her experiment are shown below.

## Kate's Results

| Time (s) | 0 | 20 | 40 | 60 | 80 | 100 | 120 | 140 | 160 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Volume <br> of <br> hydrogen <br> $\left(\mathrm{cm}^{3}\right)$ | 0 | 22 | 40 | 72 | 68 | 71 | 72 | 72 |  |

(ii) Kate has lost her result for 60 s . Use your graph to estimate the volume of gas at 60 s .

$$
54 \quad \mathrm{~cm}^{3}
$$

$\square$
(iii) State one way in which Kate can improve the validity of her experiment.
$\qquad$
(iv) Explain what happens to the pH during this reaction.
$\qquad$ The pH would increase
$\qquad$
$\qquad$
(v) Predict the volume of hydrogen you would expect to be collected after 200 s. Give one reason for your answer.
$\qquad$
I predict the volume to be $72 \mathrm{~cm}^{3}$.
$\qquad$ ..the same. it didnt increase.
$\qquad$ dint 1405 and 160s are
(c) Kate wants to compare the volume of hydrogen given off every 20 seconds if she repeated the experiment with iron instead of magnesium. State two variables that need to be controlled to ensure a fair test.

1. $\qquad$ need Er $\qquad$ add $\lg$ of ron just like
2. magnesium.
$\qquad$ Need the some mount of Hydrochloric acids.
3. 

(b) The table below shows information about the materials required for the production of one tonne of iron.

Complete the table to calculate the total cost of producing one tonne of iron.

| Raw material | Mass needed (tonnes) | Cost per tonne of <br> raw material (£) | Cost in producing <br> one tonne of iron (£) |
| :---: | :---: | :---: | :---: |
| iron ore | 1.75 | 60 | 105 |
| coke | 0.25 | 120 | 30 |
| limestone | 0.25 | 80 | 20 |
| hot air | 4.0 | 2 |  |
|  |  | Total cost | £..................................... |

(c) Aluminium is also extracted from its ore. Explain why aluminium cannot be extracted in a blast furnace using coke (carbon).
$\qquad$
$\qquad$
$\qquad$
6.
(b) The table below shows information about the materials required for the production of one tonne of iron.
Complete the table to calculate the total cost of producing one tonne of iron.

| Raw material | Mass needed (tonnes) | Cost per tonne of <br> raw material (£) | Cost in producing <br> one tonne of iron (£) |
| :---: | :---: | :---: | :---: |
| iron ore | 1.75 | 60 | 105 |
| coke | 0.25 | 120 | 30 |
| limestone | 0.25 | 80 | 20 |
| hot air | 4.0 | 2 | 8 |

(c) Aluminium is also extracted from its ore. Explain why aluminium cannot be extracted in a blast furnace using coke (carbon).
Aluminum cannot be extracted using a blast furnace because it's too high up in the $\qquad$
reactive reactivity sereis. Hownown $\qquad$

6.
(b) The table below shows information about the materials required for the production of one tonne of iron.
Complete the table to calculate the total cost of producing one tonne of iron.

| Raw material | Mass needed (tonnes) | Cost per tonne of <br> raw material (£) | Cost in producing <br> one tonne of iron (£) |

$\qquad$
$\qquad$ a $\qquad$ blast $\qquad$ furnace it is
from its ore in a elettidysis
7. (b) Explain the benefits of using less plastic.

Your answer should refer to:

- use of resources
- economic impact
- environmental impact.
(b) Explain the benefits of using less plastic.

Your answer should refer to:

- use of resources
- economic impact
- environmental impact.
- The benefits of using less plastic bags is mostly on the environment. This is because, when we didn't have to pay for plastic bags, we would just throw them on the streets when we were finished with them which indanger wildlife, because they would have thought that it would be food and get themselfs stuck in the plastic bags. Also ithelps the environmene, because the plastic bags these days are biodegradable which help \& make this planet a better place to live and they dan't take so long to decompose. Another reason is the economic impact, because we have to pay for plastic bags, all of the money goes to the government which might help us get better resources for towns, schools, parks let.
(b) Explain the benefits of using less plastic.

Your answer should refer to:

- use of resources
- economic impact
- environmental impact.
- The benefits of using less plastic bags is mostly on the environment. This is because, when we didn't have to pay for plastic bags, we would just throw them on the streets when we were finished with them which indanger wildlife, because they would have thought that it would be food and get themselfs stuck in the piratic bags. Also ithelps the environmelt, because the plastic bags these days are biodegradable which help \& make this planet a better place to live and they dent take so long to decompose. Another reason is the economic impact, because we have to pay for plastic bags, all of the money goes to the government which might help us get better resources for towns, schools, parks let.

7. 

(b) Explain the benefits of using less plastic.

Your answer should refer to:

- use of resources
- economic impact
- environmental impact.

the enviromodt with no plastic blogs to hurt animals or ruin scenery.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
(b) Explain the benefits of using less plastic.

Your answer should refer to:

- use of resources
- economic impact
- environmental impact.

plastic also
world an
The environment with no
animals or ruin scenery.
$\qquad$
$\qquad$
$\qquad$
$\qquad$

7. 

(b) Explain the benefits of using less plastic.

Your answer should refer to:

- use of resources
- economic impact
- environmental impact.

The benefits of using plastics is that they are some strong plastics, Some bendy plastics and some plastics that wont pelt but will burn. Plastics are used a cot in a cot of things just like Metals. They can be vi............. for something to................smetring in like a container box. They. $c a n$ also be recycled and reused: But ir is bet er to $\qquad$ use less $\qquad$ ot it $\qquad$ as yow $\qquad$ create plastic by using *ressetc.........estich are not renew above, then damage environment, tues also take avery sung time to rot. The less plastic the more people will..... recycle and reuse it too using less plastic hill hep the envimamenteend Earth a bot more by keeping trees etc.
(b) Explain the benefits of using less plastic.

Your answer should refer to:

- use of resources
- economic impact
- environmental impact.

The benefits af using plastics is that they............... some stang plastics, Some bendy plastics and son ce plastics that wont welt but will burn. Plastics are used a cot in a cot of things just like metals. They can be used for so southing. to keep semettaing in like a container box. They can also be recycled and reused. But.... is is better $\qquad$
$\qquad$ vise $\qquad$ less ot it $\qquad$ as y. ow need create plastic by using. *reset. plastics are not renewable, they damage environment. tue also take avery cong time to rot. The hess plastic the more people will recycle and reuse it too. Using- - Less plastic hill help the enviramenteend Earth a cot more by keeping trees etc.
